RECEIVED-WATER SUPPLY

Consumer Confidence Report Certification Form 40 (updated with electronic delivery methods)

(updated with electronic delivery methods (suggested formal)

bee sys	e community water system named above hereby confirms that its consumer confidence report has en distributed to customers (and appropriate notices of availability have been given). Further, the tem certifies that the information contained in the report is correct and consistent with the compliance pitorian data are simple with the compliance.
	nitoring data previously submitted to the state/primacy agency.
	ne: Donnie Henson
	e: Operator
	ne #: 662 - 402 - 0505 Date: 6/30/16
	ase check all items that apply.
	CCR was distributed by mail.
	CCR was distributed by other direct delivery method. Specify direct delivery methods:
	Mail notification that CCR is available on website via a direct URL
	Email - direct URL to CCR
, 111A.10	Email - CCR sent as an attachment to the email
	Email - CCR sent embedded in the email
	Other:Posted
	If the CCR was provided by a direct URL, please provide the direct URL Internet address:
	www
	If the CCR was provided electronically, please describe how a customer requests paper CCR delivery:

	mailing the CCR to postal patrons within the service area (attach a list of zip codes used)
	_ advertising availability of the CCR in news media (attach copy of announcement)
	_ publication of CCR in local newspaper (attach copy)
×	posting the CCR in public places (attach a list of locations)
	_delivery of multiple copies to single bill addresses serving several persons such as: apartments, businesses, and large private employers
	_ delivery to community organizations (attach a list)
	electronic city newsletter or electronic community newsletter or listsery (attach a copy of the article or notice)
	electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized)
for he	systems serving at least 100,000 persons) Posted CCR on a publicly-accessible Internet site at
	vered CCR to other agencies as required by the state/primacy agency (attach a list)

General Store Town Hall

"Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods as recommended by the state/primacy agency:
posting the CCR on the Internet at www
mailing the CCR to postal patrons within the service area (attach a list of zip codes used)
advertising availability of the CCR in news media (attach copy of announcement)
publication of CCR in local newspaper (attach copy)
posting the CCR in public places (attach a list of locations)
delivery of multiple copies to single bill addresses serving several persons such as: apartments, businesses, and large private employers
delivery to community organizations (attach a list)
electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
electronic announcement of CCR availability via social media outlets (attach list of social media outlets utilized)
(for systems serving at least 100,000 persons) Posted CCR on a publicly-accessible Internet site at the address: www.
Delivered CCR to other agencies as required by the state/primacy agency (attach a list)

Town of Coahoma 2015 Consumer Confidence Report

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies. Last year, we conducted tests for over 80 contaminants. We only detected 17 of those contaminants, and found only 1 at a level higher than the EPA allows. As we informed you at the time, our water temporarily exceeded drinking water standards. (For more information see the section labeled Violations at the end of the report.)

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791). Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporldium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Meridian-Upper aAquifer that has one deep well pumping from it.

Source water assessment and its availability

On the internet web at HTT://MDEQIS.DEP.state.MS.US

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of Industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved?

Meeting are held on the first Tuesday of each month at City Hall.

Water Conservation Tips

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference - try one today and soon it will become second nature.

- Take short showers a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath.
- Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month.
- Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a
 month.
- Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month.
- Water plants only when necessary.
- Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a month.
- Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during
 the cooler parts of the day to reduce evaporation.
- Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill!
- Visit <u>www.epa.gov/watersense</u> for more information.

Cross Connection Control Survey

The purpose of this survey is to determine whether a cross-connection may exist at your home or business. A cross connection is an unprotected or improper connection to a public water distribution system that may cause contamination or pollution to enter the system. We are responsible for enforcing cross-connection control regulations and insuring that no contaminants can, under any flow conditions, enter the distribution system. If you have any of the devices listed below please contact us so that we can discuss the issue, and if needed, survey your connection and assist you in isolating it if that is necessary.

- Boiler/ Radiant heater (water heaters not included)
- Underground lawn sprinkler system
- Pool or hot tub (whirlpool tubs not included)
- Additional source(s) of water on the property
- Decorative_pond_
- Watering trough

Source Water Protection Tips

Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways:

- Eliminate excess use of lawn and garden fertilizers and pesticides they contain hazardous chemicals that can reach your drinking water source.
- Pick up after your pets.
- If you have your own septic system, properly maintain your system to reduce leaching to water sources or consider connecting to a public water system.
- Dispose of chemicals properly; take used motor oil to a recycling center.
- Volunteer in your community. Find a watershed or wellhead protection organization in your community and
 volunteer to help. If there are no active groups, consider starting one. Use EPA's Adopt Your Watershed to
 locate groups in your community, or visit the Watershed Information Network's How to Start a Watershed
 Team.
- Organize a storm drain stenciling project with your local government or water supplier. Stencil a message
 next to the street drain reminding people "Dump No Waste Drains to River" or "Protect Your Water."
 Produce and distribute a flyer for households to remind residents that storm drains dump directly into your
 local water body.

Monitoring and reporting of compliance data violations

During the month of 7/1/2015, we received a violation for: Fallure to complete source sampling

Significant Deficiencies

During a sanitary survey conducted on 5/19/2015, the Mississippi State Department of Health cited the following deficiency Lack of redundant mechanical components where treatment is required

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Town Of Coahoma is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system-is-not-considered-vulnerable to this type-of-contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

	MCLG or	MCL,	1 1	Range		Camania			
Contaminants	MRDLG	TT, or MRDL		Low	High	Sample Date	Violation	Typical Source	
Disinfectants & Disinfe	ction By-F	roducts			•

Violations and Exceedances

TTHMs [Total Trihalomethanes]

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. 8/26/2015 sample yearly

Unit Descriptions				
Definition				
ppm: parts per million, or milligrams per liter (mg/L)	V			
ppb: parts per billion, or micrograms per liter (µg/L)				
	ppm: parts per million, or milligrams per liter (mg/L)			

Unit Descriptions				
NA	NA: not applicable			
ND	ND: Not detected			
NR	NR: Monitoring not required, but recommended.			

Important Drink	mportant Drinking Water Definitions							
Term	Definition							
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.							
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.							
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.							
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.							
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.							
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.							
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.							
MNR	MNR: Monitored Not Regulated							
MPL	MPL: State Assigned Maximum Permissible Level							

TT Violation	Explanation	Length	Health Effects Language	Explanation and Comment
violations	•	6/14/2012 to date		Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites, which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.
